

Connecting and Collaborating for Success

Planning a small virtual, hybrid or face to face meeting?
Find out more about our Connectivity Packs to help your teams meet,
plan and learn.

Increasingly we've seen the need from our clients to continue to hold small meetings to enable future planning and collaboration to move projects forward with success. Our clients are requesting the ability to get together using blended formats.

We've supercharged our onsite technology, allowing teams to meet flexibly and accessibly. Whether teams are distanced, isolating or locked down, we have a solution to ensure forward progress doesn't come to a standstill.

- **Video Conferencing** – enabling remote colleagues to gather virtually and interact with a small physical group meeting onsite, for example a board meeting that needs external participants to drop in for sessions.
- **Kubi Telepresence Robots** – offering an individual team member a virtual presence in the room as if physically present. Telepresence robots allow remote attendees to be more immersed in the experience allowing deeper discussion and collaboration. Our Kubis have been shown to make meetings more dynamic, energetic and productive.
- **Dedicated Digital Rooms** – allowing users to join scheduled Zoom calls or make ad-hoc Zoom calls, as well as present local content in the room, either by a hard-wired HDMI connection provided or via our Zoom Room built-in presentation system.
- **Samsung Smart Flip Board** – permits ease of facilitating, collaborating and explaining.
- **Onsite Tech Support** – within Covid guidelines we can offer support to your meeting.

All underpinned by superfast stable dedicated broadband and enhanced Wi-Fi.
